

... to destroy building odors - ozone.

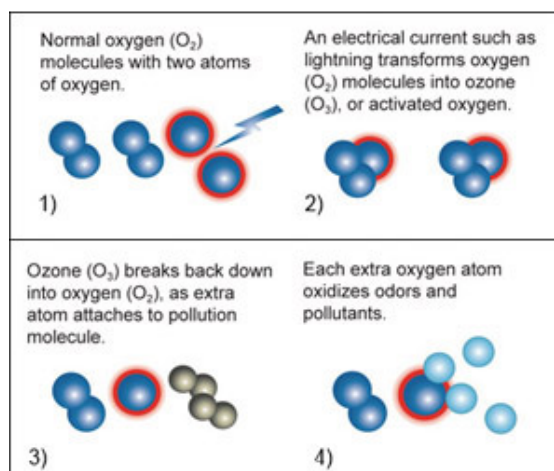

An ozone generator generates O_3 , or ozone, a very active molecule, which destroys odors (organic molecules) through oxidization - the product of which is CO_2 and H_2O .

Generated ozone molecules diffuse throughout the volume to be treated and neutralize odors from: perfumes, cigarettes, smoke damage, mold & mildew, decay, cooking, food, pets, carpets, water damage, cleaning chemicals, construction.

Caution!

Ozone generators are for use in **unoccupied spaces** only. Never ozonate when people are present. Long-term exposure to even low concentrations causes eye and respiratory irritation.
