

... to make a roof cool & last much longer - a silicone coating.

Advantages:

- . Eliminates the need to replace roof.
- . Provides a seamless, durable membrane.
- . Tolerates ponded water very well.
- . Exceptional weathering characteristics.
- . Reflective, cool roof, saves energy.
- . Cool roof prevents underlying roof failure.
- . Flexible even at extreme temperatures.
- . Breathes; prevents moisture entrapment.
- . Resists ozone, harsh chemicals.
- . Lasts decades.

Preparation:

- . All surfaces must be clean, dry and free of any oil, grease or dirt.
- . Any existing coating must be checked for good adhesion.

Application:

- . airless sprayer (1 gpm, 3,000 psi) . synthetic bristle brush . long nap roller

Recommended:

Infra-Red thermometer - \$50
