

... to treat many systems inexpensively - a portable chemical feeder.

A converted garden sprayer suffices. It connects to any valve on the system having garden hose thread.

Corrective treatment chemical is dissolved, poured into the feeder and pressurized with the hand pump up to 60 psi.

The hand valve is used to feed chemical solution into the system.

cost: \$36

... the usual alternate - a expensive, dedicated pot feeder

pot feeder:	\$350
hardware:	\$50
<u>installation:</u>	<u>\$200</u>
total:	\$600
